For most tsunami warnings, evacuate out of the red zone (Extreme Tsunami Evacuation Zone) and evacuate out of the yellow zone (Tsunami Evacuation Zone) if you feel shaking. Move inland immediately if you are caught near the shoreline; consider using vertical evacuation structures or move to higher ground on or above the fourth floor if you feel shaking. Evacuate well inland from the red tsunami evacuation zone generated tsunami. If you feel shaking, move inland immediately.

These maps do not consider the destructive effects of a locally generated tsunami. If you feel shaking, more inland immediately, well inland from the red tsunami evacuation zone. The evacuation zone is a guideline and should be considered the minimum safe evacuation distance.

Structural steel or reinforced concrete buildings of two or more stories provide increased protection on or above the fourth floor.

For an Extreme Tsunami Warning, you should evacuate to the safe zone. Remain at least 100 feet away from inland waterways and marinas, and connected to the ocean due to wave surges and possible flooding.
