

SHELTERING-IN-PLACE: USE YOUR EXISTING TOILET

Even if the sewage lines are down or if you're short on water, it's still possible to use your existing toilet.

First, remove as much water as you can from the bowl.

Second, tape a doubled-up trash bag to the underside of the toilet seat and let the bag fill the cavity of the bowl.

Have a pail of kitty litter or sawdust available so that after each duty is done, the offender can sprinkle a liberal amount over it. This will keep the stench down. Use gloves to keep your hands clean and free of chemicals/germs.

Finally, when the bag is filled up 2/3 the volume of the bowl, top off with baking soda or other disinfectant. If you do not have any of these things, you can use dirt with a little bit of a chlorine solution sprayed in it. After the addition of the disinfectant, securely tie up the bag and place it in a temporary, sealable container (like a 5-gallon bucket or trash container). Keep it in there until you can find a good time and place to dispose of it.
