Survey Background

Survey Purpose
Staff of the City and County of Honolulu Department of Planning and Permitting contracted with National Research Center, Inc. to conduct surveys of residents in the neighborhoods near planned rail transit stations (see map below). The surveys were designed to assess residents’ perceptions about their neighborhood and opinions about potential transit-oriented development opportunities near the new rail stations. Surveys were conducted in seven neighborhoods over a period of four years (2011 to 2014). For the most part, the same questions were asked in each iteration of the survey, with minor changes in wording to update the neighborhood and station names and the addition of a few unique questions to address neighborhood-specific issues.

A report of results was created for each neighborhood survey and results have been used by staff to guide conversations about future public investment and development around the rail stations. In this report, results from the questions common to all neighborhood surveys are compared by station area.
Survey Methods
For this series of community surveys, mail surveys were sent to approximately 1,350 households near each planned rail station in each community. While the intent was to survey residents within a half mile of each of the planned stations, for areas where housing was less dense this radius was extended to as much as 1.5 miles. The number of surveys mailed, successfully delivered and completed is shown in Figure 1. Response rates to the neighborhood surveys varied from a low of 19% to a high of 28%.

Survey results were weighted so that respondent age, gender, ethnicity and housing tenure (rent or own) were represented in the proportions reflective of the entire adult population living in Census blocks covered by each neighborhood area (as reported from the 2010 U.S. Census and the 2005-2009 American Community Survey). Overall results (“All” respondents) were not weighted to reflect the disproportionate number of people living in each neighborhood area, as census blocks overlap and determining a unique population for each neighborhood area was not possible. As such the results reported for “All” do not reflect the correct population proportions, but show overall results for the respondents we heard from.

More information about the survey methodology for each survey can be found in each neighborhood report, under separate covers.
Understanding the Results

"Don’t Know" Responses
For ease in presenting the comparisons by station and neighborhood, this report only presents results for respondents who had an opinion (i.e., “don’t know” responses are excluded). “Don’t know” responses can be found in the neighborhood reports, under separate covers.

Precision of Estimates
It is customary to describe the precision of estimates made from surveys with a “level of confidence” (or margin of error). The 95 percent confidence level for this survey is generally no greater than plus or minus 1.4% around any given percent reported for all respondents (4,875). The margin of error for each neighborhood is shown in Figure 1. The margin of error for each station area is shown in Figure 2.

The average margin of error for the neighborhoods is ±3.7%, ranging from ±3.0% for Kalihi (N=1,100) and downtown (N=1,088) to ±5.4% for Halawa (N=326). The average margin of error for the stations is ±6.3%, ranging from ±3.7% for Kalihi Station (N=697) to ±13.3% for Middle Street Station (N=54).

*None of the residences in the Aiea-Pearl neighborhood were closer to Leeward Community College station than they were to either Pearl Highlands or Pearlridge stations.

When comparing results between subgroups (i.e., stations or neighborhoods), the margin of error (or confidence interval) varies by which two groups are being compared and how many respondents are in each subgroup. Figures 3 and 4 show the margin of error for comparison between all the pairs of neighborhoods (Figure 3) and stations (Figure 4) that could be compared.

The average margin of error for comparison between the neighborhoods is ±6%, ranging from ±4% for comparisons between Kalihi (N=1,100) and downtown (N=1,088) to ±7% for comparisons between Ala Moana (N=373) and Halawa (N=326).

The average margin of error for comparison between the stations is ±9%, ranging from ±6% for comparisons between Kalihi Station (N=697) and Chinatown Station (N=536) to ±18% for
comparisons between Middle Street Station (N=54) and Honolulu International Airport Station (N=67).

Differences in responses between any two groups must be greater than the margin of error in order to be considered a statistically significant difference at the .95 confidence level. For example, since the margin of error between the two groups is ±9%, if 53% of Kapalama Station area residents and 62% of West Loch Station area residents said they felt safe in the city, this would not be statistically different. However if 53% of Kapalama Station area residents and 63% of West Loch Station area residents said they felt safe in the city, this would be considered statistically different.

Comparison of Results
Community Amenities

Many factors contribute to creating a desirable neighborhood, including physical attractiveness, cleanliness, and the presence or absence of services, parks and other amenities. Residents were asked to rate the current state of their neighborhood and to indicate what they most wanted to see improved.

Over half of residents near the Airport (76%), Lagoon Drive (71%) and Pearl Harbor (57%) stations gave excellent or good ratings to the cleanliness of public spaces. This question was not asked of those in the downtown and Kalihi neighborhoods, but fewer than half of those living near stations west of Pearl Harbor gave excellent or good ratings to the cleanliness of public spaces.
**Neighborhood Parks**

Overall, 30% of respondents said the people in their household never used neighborhood parks and 27% used the parks once a month or less frequently. About 4 in 10 respondent households used the parks at least a few times each month. Park use was most common near the Airport, Ala Moana and Lagoon Drive stations, and least frequent near the Middle Street and Pearl Highlands stations.

When asked to rate the quality of neighborhood parks for different activities, most residents said the parks were fair or poor (57%), and few said they were excellent (7%) for playing sports. Parks near the Airport, Lagoon Drive and Waipahu stations received the best ratings from nearby residents, while parks near the Middle Street, Chinatown, Downtown, Aloha Stadium and Kapalama stations received the worst ratings from nearby residents.

Overall only 33% of respondents rated playgrounds for children within their local parks as excellent or good, while 35% rated them as fair, and 32% thought they were poor. Parks near the Airport, Lagoon Drive and Ala Moana stations were best at providing children's playgrounds, and parks near the Middle Street, Kalihi and Kapalama stations received the worst ratings from nearby residents.

While most residents felt at least somewhat safe in their neighborhood parks during the day (23% very safe and 51% somewhat safe), they did not feel as safe at night (Figure 10). Over half of residents felt very (39%) or somewhat (35%) unsafe in their neighborhood parks at night.

Residents who lived near the Airport, Lagoon Drive and Ala Moana stations felt safest in local parks, while those living near the Chinatown, Kalihi and Aloha Stadium stations were least likely to feel safe in their local parks during the day.

Neighborhood Businesses
Residents were asked about the types and quality of businesses in their neighborhood (Figure 11). Overall, more than three-quarters of respondents said they had restaurants, grocery stores, beauty salons, drug stores, convenience stores and coffee shops in the neighborhood. About two-thirds said there were laundries or drycleaners and bars or nightclubs nearby, while only 43% knew family entertainment businesses in their neighborhood.

Residents near the Pearlridge (89%) and Pearl Highlands (92%) stations were much more likely to say there were family entertainment businesses in their neighborhoods and a majority of residents of near the Chinatown (60%), Downtown (58%) and Ala Moana (63%) stations also said there were family entertainment businesses in their neighborhoods. Those near the Lagoon Drive (8%) and Middle Street (12%) stations were least likely to say there were family entertainment businesses in their neighborhoods.

Bars and night clubs were most likely found near the Chinatown, Downtown, Ala Moana and Pearlridge stations and least frequently found near the Airport and Lagoon Drive stations.

Residents who were aware of businesses in their neighborhood were asked to rate the quality of these businesses (Figure 12). About three-fourths of residents gave ratings of excellent or good to convenience stores, grocery stores and drug stores, and about 7 in 10 gave ratings of excellent or good to restaurants, coffee shops and family entertainment. Less favorable ratings were given to bars and nightclubs (39% excellent or good).

Community Resources
When asked whether they were aware of a variety of community resources in their neighborhood (Figure 13), about two-thirds or more of respondents agreed that there were schools, medical clinics/dentists, libraries, affordable housing, community centers and child day care. Fewer were aware of senior centers (46%), youth centers (52%) and housing (29%).

Community, senior and youth centers were most likely to be identified as present by the residents near the Waipahu and West Loch stations and least likely to be identified by those near the Middle Street station. Schools were slightly less common near the Chinatown, Downtown and Ala Moana stations. Few near the Ala Moana station (23%) said there was a library nearby, while most near the Waipahu (96%) and Iwilei (92%) had close access to a library.

In addition to identifying what community resources were available in their neighborhood, residents who were aware of each resource were asked to rate its quality (Figure 14). Residents gave the highest ratings to libraries and medical clinics/dentists in their neighborhood, with about three-quarters indicating "excellent" or "good." About two-thirds gave favorable ratings to schools and child day cares, while senior and affordable housing received the lowest ratings.

Quality of community resources was only rated by those who said they were aware of the resource in their neighborhood. 
NA= not asked in this survey iteration.

14

Comparison of Results
**Best Things about Neighborhood**

No matter which station they lived by, a majority of residents said that the location (proximity to work and transportation) was one of the three best things about their neighborhood. Proximity to shopping was also highly valued. Those near the Airport station were more likely than those in other neighborhoods to mention the type of housing as one of the best things about their neighborhood.

Beyond proximity to work, transportation and shopping, the affordability and quietness of the neighborhood were the next most often mentioned (by about 2 to 4 in 10 residents) followed by schools, home size or type and neighborhood safety (mentioned by about 2 to 3 in 10 residents).

![Table showing comparison of results for different neighborhoods.](image)

*Figure 15: Like Most about Neighborhood*

What 3 things do you like most about living in your neighborhood?
Areas for Improvement

Residents were also asked to choose the three things they liked least about their neighborhood. They could choose from a list or write in a response if their least favorite things were not listed. Overall, the most common complaints were that housing costs were high (42%), the neighborhood was too noisy (38%), crime was too prevalent (30%), the neighborhood felt unsafe due to crime, traffic or other reasons (25%) and the housing was too small (23%).

These complaints did vary somewhat by station area. About 3 in 10 of those living near the Pearl Highlands, Pearlridge, Aloha Stadium, Pearl Harbor, Airport, Lagoon Drive and Ala Moana stations did not like that they didn't know many neighbors (neighborhood was isolating).

What 3 things do you like least about living in your neighborhood?
Isolating = "Don’t know many neighbors"
Houses = "Housing is in poor condition"
Having outlined what was good or bad about their neighborhoods, residents were asked what five things they would most like to see built or improved. They could choose from a list or write in an item. While the magnitude varied by station area, overall the top two concerns were related to mobility: 50% wanted to see improved sidewalks/crosswalks and 48% wanted more car parking. Many also wanted homes to be less expensive (38%) and additions or improvements to paths and trails (31%) and parks (30%). Sports facilities were in the top five most desired improvements for those living near the Pearlridge, Aloha Stadium, Pearl Harbor, Airport, Lagoon Drive and Iwilei stations, and community gardens were in the top five most desired improvements for those living near the Pearl Highlands, Pearl Harbor, Airport, Lagoon Drive, Chinatown and Downtown stations.

If only a few of the following amenities could be built or improved in your neighborhood, which five would you most like to see built or improved? (Check the 5 that are most important to you)
Gardens= “community gardens”
Residents were also asked to identify, in their own words, one thing they would do to improve their neighborhood. These written responses were classified into categories, with “other” representing the broader range of unique ideas that did not fit into a specific category. No one idea was embraced by a majority of residents as the “one thing” to do improve the neighborhood, but reducing crime (or improving safety) was among the top five suggestions for 13 of the 15 station areas (not in the top five for the Downtown and Ala Moana stations). Cleaning up the area was among the top five suggestions for 11 of the 15 station areas (not in the top five for the Pearl Highlands, Pearlridge, Airport and Lagoon Drive stations). Reducing homelessness was most frequently mentioned as an important improvement for the areas near Iwilei, Chinatown, Downtown and Ala Moana. Improvements to walking and biking infrastructure were desired in 8 of the 15 neighborhoods, parking was a top-five desired improvement in 6 of the 15, and improving roads was a top-five desired improvement in 5 of the 15 neighborhoods.

![Table: Most Desired Neighborhood Improvements]

If there was one thing you could do to improve your neighborhood what would it be? (Open-ended question categorized into themes): Walking/biking=sidewalks, crosswalks, paths and bike lanes; Parks/rec=parks, gardens and recreation areas or center.
**Thoughts about Relocation**

Most residents planned to stay in their homes for at least the next two years, while 23% planned to move in this time frame. Those living near the Airport station were most likely to be contemplating a move, those near the Middle Street, Aloha Stadium, Waipahu, Chinatown and Kalihi stations were least likely.

![Figure 19: Plans to Move](image)

Do you plan to move from your current home in the next two years?

- **ALL**: 23%
- **Airport**: 51%
- **Lagoon Drive**: 32%
- **West Loch**: 29%
- **Kapalama**: 25%
- **Pearlridge**: 25%
- **Downtown**: 24%
- **Pearl Harbor**: 24%
- **Pearl Highlands**: 24%
- **Ala Moana**: 23%
- **Iwilei**: 23%
- **Kalihi**: 21%
- **Chinatown**: 19%
- **Waipahu**: 19%
- **Aloha Stadium**: 18%
- **Middle Street**: 10%
Of those few who planned to move, most did not plan to stay in their neighborhood (81%); 22% planned to leave Oahu, 40% planned to move to another location in Honolulu, and 20% would move outside the city while remaining on Oahu.

**Figure 20: Location of Move**

If you plan to move, where will you move?

- Another place in Honolulu: 40%
- Outside Oahu: 22%
- Outside Honolulu, but on Oahu: 20%
- A new place in this neighborhood: 19%

This question was only asked of those who indicated that they plan to move, responses are reported for all areas together as few answered from each station area.
Regardless of their intent to move, neighborhood residents were asked what type of neighborhood they most desired. Overall, a neighborhood with low-scale single-family homes where a car primarily was used for transportation was most popular (66%). About 2 in 10 wanted to live in a neighborhood with low-rise apartments with opportunities to use cars or transit to get around, while only about 1 in 7 preferred living in high-rises and walking and using transit to get around.

This varied greatly by the area the respondent lived in. About half of those who lived in Ala Moana preferred high-rise living, and 22% liked low-rise multi-family buildings, while almost everyone living near the Airport and Pearl Harbor preferred single-family homes.

</tbody>
</table>

*Not asked in all neighborhood surveys.

**High-rise: 15-30 story high-rise apartment/condominium buildings, walking and using transit to get around**

**Low-rise: 3-4 story apartment buildings and townhomes, using transit and my car to get around**

**Single-family: Low-scale single-family homes, using my car as the primary way to shop and get to work/school**

Why the variation by area? This could be due to factors such as the current availability of housing types, the proximity to transportation options, and the overall design of the area.
When asked what specific neighborhood in Honolulu they would most like to live in, residents gave a wide variety of responses, but just under half said they wanted to stay in their current neighborhood.

Neighborhood Mobility

Respondents were asked how easy it was to get around their neighborhood by car, bike, walking and transit; they were also asked to rate aspects of the infrastructure that support these travel modes.

Most neighborhood residents said they could get around Honolulu with at least a fair amount of ease. Only 11% rated their ease of travel as poor, and just 9% said it was excellent. Residents living near the Chinatown, Downtown, Iwilei and Kapalama stations had the easiest time getting around Honolulu, and those living near the Pearlridge, Pearl Highlands, Airport and West Loch stations had the most difficult time.

Travel Patterns

About half of all residents who were working or attending school used alternate transportation modes for at least one day of their commute each week (Figure 30 and Figure 31), while about half drove alone every day (Figure 32). The use of modes varied dramatically by the area of residence, with 7 in 10 residents living near the Chinatown and Iwilei stations, compared to only 2 in 10 residents living near the Airport station, using alternative transportation at least once a week.

Seven in ten or more of commuters living near the Pearl Harbor, Airport and Lagoon Drive stations drove a vehicle alone for their commute every day of the week while half or more of commuters living near the Chinatown, Iwilei and Kalihi stations used alternative transportation for their commute every day of the week.

Figure 30: Commuted by Travel Mode At Least Once in Prior Week (if Worked or Attended School)

*Alternate transportation= bus, walk, bike, carpool, vanpool or telecommute.
Total may exceed 100% as respondents could use more than one mode.
### Figure 31: Commuted by Travel Mode At Least Once in Prior Week (if Worked or Attended School)

*Alternate transportation= bus, walk, bike, carpool, vanpool or telecommute. Total may exceed 100% as respondents could use more than one mode.
Most households had at least one car and no bikes. Both bike and car ownership was most prevalent for those living near the Lagoon Drive, Pearl Harbor and Airport stations. Car ownership was least prevalent for those living near the Chinatown and Downtown and Iwilei stations. Bike ownership was not prevalent in most areas.

</table>
Almost all residents (94%) had heard about plans for building a rail transit line in Honolulu. The likelihood of using the rail line to commute to work or school, once it was built, varied markedly by the location of residence (Figure 37). Those living near the Downtown and Ala Moana stations were least likely to think they would use rail to get to work or school, but many of them live near their work or school. Those living near the West Loch, Kapalama and Kalihi stations were most likely to use rail for their commute.

Residents near the Airport, Chinatown and Iwilei stations were most likely to say they would use the new rail line for shopping trips (Figure 38), to go to restaurants, bars or nightclubs (Figure 39) and to visit beaches or recreation areas (Figure 40) while those near the Downtown and Ala Moana stations were least likely. About half or more of residents near 10 of the 15 stations said they were likely to use rail transit to visit friends and family (Figure 41).

Overall, at least 3 in 10 residents near every station said they were likely to use the rail for each of the purposes (commuting, shopping, going to restaurants, bars or nightclubs, beaches or recreation areas and visiting friends).

Development Opportunities

When residents were asked which of a list of amenities they would support (or oppose) being built near their closest station, most of the amenities listed received support (Figure 42). Strongest support was for providing restrooms, improving landscaping, adding places to sit, bicycle parking, bus shelters and coffee shops and restaurants. Support was weakest for both market rate and affordable/subsidized housing and services like hair salons or drycleaners; however, these still had more support than opposition.

Those living near the West Loch and Middle Street stations were most supportive of new housing (market-rate or affordable/subsidized) near their planned rail station, and those living near the Pearlridge, Aloha Stadium, Pearl Harbor, Lagoon Drive and Ala Moana stations were least supportive. Residents living near the Downtown station were more supportive of market-rate housing and less supportive of affordable/subsidized housing.

Residents living near the Middle Street, Kalihi, Kapalama, Iwilei, Chinatown and Downtown stations were asked how much they would support or oppose building new structures of various heights. While residents supported new buildings that were one to three stories, support dropped as heights increased, and most opposed having new buildings nine or more stories in height (Figure 43). Opposition to taller buildings was slightly weaker in Iwilei and Chinatown than near the other stations.

Residents also were asked whether they would support or oppose specific types of development near the planned rail stations. Parks, retail stores/services and parking structures received the most support. Support was weakest (and opposition strongest) for hotels and residential or office towers (Figure 44).

Support for improving major streets near the planned rail stations was strong. Residents welcomed all the improvements suggested and most strongly supported improving sidewalks, adding crosswalks, bike lanes and street lighting, planting trees, adding trash bins and places to sit and expanding bus service (Figure 45). Adding street parking received the least support but was still somewhat supported, on average. While support did not vary widely by area, those near the Downtown, Airport and Aloha Stadium stations were less supportive of adding street parking and those near the West Loch, Middle Street, Kalihi, Kapalama and Iwilei stations were more supportive.

How strongly would you support or oppose the following types of new development near Aloha Stadium rail station?

*Not asked in all neighborhood surveys.*
Appendix A: Survey Results by Neighborhood

When comparing results between neighborhoods, the margin of error (or confidence interval) varies by which two neighborhoods are being compared and how many respondents are in each neighborhood. The table below shows the margin of error for comparison between all the pairs of neighborhoods. Differences in responses between any two groups must be greater than the margin of error in order to be considered a statistically significant difference at the .95 confidence level.

Appendix B: Survey Results by Station

When comparing results between station areas, the margin of error (or confidence interval) varies by which two station areas are being compared and how many respondents are in each station area. The table below shows the margin of error for comparison between all the pairs of station areas. Differences in responses between any two groups must be greater than the margin of error in order to be considered a statistically significant difference at the .95 confidence level.

![Margin of Error for Comparison between Two Stations](image)
